

GHH RAND®

Dry Bulk & Liquid Discharge Solutions for Road Tankers

Wherever customized solutions for the unloading of silo and tank vehicles are needed GHH RAND offer a wide range of tailor-made packages. Regardless whether granular, pellet, powder or liquids are concerned.

The transport industry has high expectations of their capital product and service providers. The solutions provided by GHH RAND meet these criteria thanks to a high standard of operational safety, low noise emissions, market leading reliability and longevity of the products.

We provide customised modular package solutions which are designed to be 'plug and play' with various bulk applications. Our modular portfolio includes; Standard, LITE, In-Chassis, Intercooled and Liquid package solutions.

GHH RAND Transport also offers support throughout the lifecycle of our products. We have developed a range of lubricants to meet the arduous demands of the bulk transport industry. These lubricants are further supported by our European wide network of authorised sales and service partners.

Powder

Pellet

Liquid

More on our Range of Solutions

Standard

Our standard solution range provides reliable performance and is widely used for many common applications in the dry bulk market.

LITE

The LITE solution offers a simplified version of the standard dry bulk compressor solution, without simplifying on performance.

Intercooled

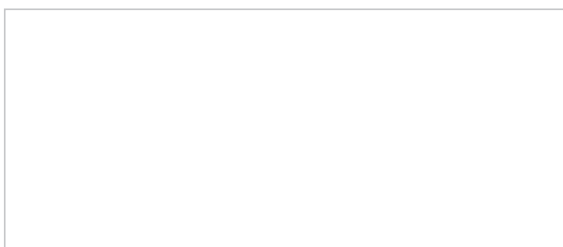

The Intercooled solution delivers oil-free and cooled compressed air for the pneumatic conveyance of heat-sensitive bulk goods.

In-Chassis

Lightweight in-chassis compressor packages offer an even lower weight solution in comparison with belt driven compressors.

Liquid

Transporting bulk liquid products is a critical process in many industry's supply chains and businesses around the globe rely on liquid bulk compressors for the safe, efficient, and effective transfer of their liquid payload. For liquid bulk conveyance, GHH RAND® has developed the SV200, a compact sliding vane oil free compressor for the discharge of bulk liquid road tankers. German-engineered with the specific needs of professionals in the road tank industry in mind, our solution for the liquid bulk market is optimised to offer the user next-level performance and reliability.
